

$$D_{FULL} = D_{AMP} + D_{AP}$$

$$D_{AMP} = \sum (A_i - A_j)^2$$

$$D_{AP} = \sum 2A_i A_j [1 - \cos(\Delta\phi)]$$

$$D_{FULL} = ENERGY + INTERFERENCE$$

$$INTERFERENCE = -\sum 2A_i A_j \cos(\Delta\phi)$$

Mathematics is exact; the empirical discovery concerns reproducibility and phase-randomization tests.
